

How FacilityOS Helps You Stay ITAR Compliant

Control Access & Protect Sensitive Information

ITAR (International Traffic in Arms Regulations) requires strict control over who can access defense-related sites and materials. FacilityOS supports compliance with these regulations through its visitor management and physical identity and access control modules, providing controlled access, identity verification, and detailed record-keeping.

FacilityOS Features That Support ITAR Compliance

What You Need To Know:

ITAR compliance is essential for organizations that work with defense-related materials. These regulations:

1. Govern the export and import of defense-related articles and services
2. Aim to keep sensitive technology from falling into the wrong hands
3. Are critical to protecting national security
4. Apply to companies that manufacture, export, or handle controlled materials

Failing to meet these standards can result in legal consequences and national security risks.

ID Scanning

Scan government-issued IDs or passports to verify identity during check-in. Print badges that clearly indicate visitor name, photo, and whether they are a U.S. citizen.

Watchlist Screening

Automatically screen visitors against denied and restricted third-party watchlists, including: Consolidated Screening List (Trade.gov), Descartes Visual Compliance, FinScan, E2Open.

Control Access

Limit access to specific areas containing defence-related articles and services, ensuring only authorized individuals have access to ITAR-controlled areas.

Legal Document Management

Require visitors to review and sign NDAs or other legal forms before granting access. All signed documents are stored securely and tied to the visitor record.

Digital Audit Trail

Maintain comprehensive digital records of all visitor activity, including entry and exit times, purpose of the visit, and areas accessed, providing an audit-ready log for ITAR compliance.

Real-Time Notifications

Stay informed with real-time notifications about visitor activities, enabling immediate response to any unauthorized access attempts.

Physical Security Systems Integrations

Seamlessly integrate with existing security and access control systems for enhanced control and monitoring of visitor movements throughout your facility.

Customizable ITAR Compliance Protocols

Tailor the sign in experience to meet specific ITAR requirements relevant to your operations, ensuring a customized approach to compliance.

Data Protection

We stay current with industry standards, enforce rigorous data security measures, and undergo regular audits to verify adherence to established information security processes and systems, ensuring the protection of sensitive information.

Stay Compliant. Stay Secure.

Connect with our team to see how FacilityOS can help you meet ITAR requirements with confidence.
